rewards from their harvests  
... have you?

# Abacus<sup>®</sup> Advance – premium fungicide

## Key advantages beyond crop protection

Abacus Advance is composed of two active ingredients with contact & systemic activities for the control of tough fungal diseases. As a systemic fungicide, it penetrates through the plant giving good control of diseases and as a contact fungicide it remains longer on the leaf to prevent new infections for a longer period of time.

- Effective control of *Septoria*, stem rust & yellow rust
- Improves water efficiency with more yield per unit of water used
- Improves assimilation of nitrogen that enables better plant growth
- Increases daily CO<sub>2</sub> uptake which leads to increased starch production and therefore better yield
- Inhibits ethylene and prevents premature ripening
- Keeps leaves greener and healthier by reducing oxidative stress
- Induces resistance against viruses and bacteria
- Quicker plant defence reaction on disease attack.

## New standard in cereals

- Acts as a systemic, local systemic and translaminar fungicide
  - protects all parts of the plant
- Protective and curative effect
  - high flexibility for application
- Prevents spore germination, infections and mycelia growth
  - no secondary infections in later stages of plant growth
- Broad disease control spectrum
- Excellent control of *Septoria sp.*, stem rust and yellow rust
- Reliable in practice due to long-long-lasting activity

**Dose rate:** Abacus<sup>®</sup>Advance in Cereals - 1 l/ha
